Royal Gardens,
Kew. Oct. 27. 1857.

My dear Sir

Allow me to congra-
tulate you upon the
honour you have lately
received & which you
so eminently deserve
for your valuable
labours in promoting
the cause of the Ex-
hibition.

But I have another
subject on which I
wish to solicit the liberty
of addressing you. I
fear you must think I

give you an ingenuous reception when you & your friends come & see us at Museum at the Botanic Garden. The fact is I was taken aback by the information this fact communicated to me, that the Executive Committee of the G. E. were contemplating the formation of a Museum, & was making general application to the Exhibitors to contribute to so important an object: knowing my

manufactures articles in all the kingdoms of nature.

Our Collection you will observe is confined to the Vegetable kingdom & I regret I only in the Garden & Stoves, to exhibit vegetable & exhibit to the public every useful living plants: & 2 dry in the Museum, to exhibit the several raw products of these plants, & the different states & thus & to a certain extent the finished uses to which they are applied: — for example. In the Palm-

stove we shown the living
plant of the "Vegetable Ivory"
(Phytelephas macrocarpa)
in a case in the Museum
you will see the noble
fruits they bear, as
big as a man's head :—
some of them are shown
broken & exhibiting
the seeds. The entire
seeds are shown, & others
laid open to display
the inside structure, a
mass of ivory-like sub-
stance. A côté is a
tray with the rude fi-
gures which the Abori-
gines of the Magdalena

correct notion of which
you is to be, there can
not be the smallest
doubt that the two
would mutually il-
lustrate each other &
they would both be of
the highest national
importance — to Science
& the Arts & to Trade &
commerce.

I only address you on this
time as a private indi-
vidual : but I have
every reason for knowing
that our Chief Commis-
sioner shares the same
view of the value of the

conniving Lords Museums
as I am now alluding
to. He showed me
with much satisfaction
a beautiful drawing I
a plan for erecting
this Museum in Battery
Park New York, which
had been sent to him
from in Whitehall.

Yours
my dear Sir,
very truly &
faithfully
W. J. Hooker

DSi

correct & such of these Ivory
like beads. but I do not
think my illustration
complete unless I have
another little trifle with
half a dozen of the articles
made in civilized Europe
of the same material. My
wish in putting to gain a
few statistical facts on
the commercial value of
the article in question.

You perhaps may recollect
the Gallery of our Museum
& you would see one end
of it occupied entirely by
the different states of the
Flag of Ireland, given by
the U. States Flag Society.
Being as presented I could
not well refuse it: but I

thinks we have carried that a great deal too far: two thirds of it being occupied by the manufactured article: — the progressive condition of the fibre, from the bundle as got: thread in the finer — very important to show, & one or two samples of a woven article — but not as a specimen of perfected manufacture. Samples however of "Cotton-flax" &c. I should not like to reject.

There may be a little difficulty in drawing the exact line of distinction between the two Museums: — but if I have any thing like a

DSI

self receives only a little before the warrant of: emanates from Col. Reid from Earl Grey & is to that the promotion of our Museum of Vegetable products under home their support. I did not then see how the two things were compatible (though as you told me, you did): — & certainly 9/10ths of the answers to the Exhibition by my petitioners have been "we have already offered our Articles to the Executive Committee, & they are accepted."

I must do D. Lindley

the justice to say that he took your view of the matter - that the two were incompatible & need not interfere with each other. I am sure he would, & I want to show the various states of the material & which each stitch is one made".

Probably these few words do illustrate the difference between the contents of the Museum you contemplate, & that which I am forming here. You will to collect all the bits

ROYAL GARDENS KEW

October 24. 1863.

My dear Sir

I have had a very large cor-
respondence with Botanists
& Nurserymen & for nearly
the last 60 years I have
preserved their correspon-
dence :— & it would grati-
fy me, more than it would
you, if I could find among
it, any letter, even one letter
from Edward Vogel. With
his namesake, Theodore,
who also fell a sacrifice
in Africa, I had a large
correspondence. But though
I have again searched through
my volumes of African Cor-

Hooker f 8

pondence, does not find
on single letter to
me from Edward Vogel.

I think Dr. Leeman, too,
a great interest in the
latter, your friend & he
it was, my dear Dr. Bastian
says, who brought him
out to Kew, - perhaps more
than once. Then it was
I had the pleasure of
seeing him. If he, in
any letter expressed a
desire that any of his new
plants should be dedica-
ted to such names as
Vöhopia, Bunsenia,
Nimbia it was probably
Dr. Leeman or
some other of his Corres-
pondents. Whatever we
have received of his plants
has come through the Foreign
Office, or been sent the Offici
con collections that are
deposited at Kew. - I
hope we shall by & bye
have instructions for
publishing them. I
have certainly been in corres-
pondence with Earl Russell
on the subject. But no
thing has yet been decided.
I presume I shall be re-
quired by & bye to report
officially on all the
collections, which are
very considerable. There
is less of novelty perhaps in
Edward Vogel's collection
than in others. But that
was no fault of his. His
latest collections we have

Sir W. Hooker

Royal Gardens,

some of the specimens of
mulosum. You have
the true description of
Lactuca, Linn. Your
answers the specimens
sent: — but not the
one marked "Mala Loco"!
— which is the weedy
form, readily known
by the sharp teeth of
its leaflets. Your
country is undoubtedly
rich in Forms. A
friend of mine was
in the South Isles of
Aran, Galway, lately

& gathered the rare Adoxa
moschatellina, which grows in great
abundance there; —
but was not keen on the
specimens with us
at home.

Pray believe me,
my dear Lord,
Your Lordship's
faithful friend
& servant,
W. J. Hooker.

ples & the paper, both
as to size & quality
which I wish to have.

The quality of this two
is: indeed to be the same.

I Reams cut into
½ sheets. I a certain
size, & 6 cut at the
three edges only, & left
one whole sheet. On
the ½ sheets dried
specimens of plants are
sentenced with glue, &
a certain number of
those are just cut into
wholes sheets & placed in
the Cabinets of the
Herbarium. Mr Gunyon
& me fully un:
derstood the exact
nature of the paper.
That formerly sent
was exactly which
I wished of that
kind.

Respectfully
Your obed. Serv.
W. J. Hooker

June 28. 1857.

My dear Mrs Cooke

I & Mr Mosher & his family are on visits in Norfolk & Suffolk, so that I am sure they cannot have the pleasure of accepting your kind invitation: & I am sorry I say that Lady Mosher's & my engagements are such with friends at home

that it is out of our
power to join your
party on Wednesday.

Believe me,

my dear Mr. Cooke,

with many thanks

for your kindness,

Faithfully Yours,

W. J. Hooker

Royal Bot. Gardens,
Kew. Nov. 14. 1842

DSI

Royal Botanic Gardens, Kew.

Sept. 28th 1842.

My dear Hijdohn,

There are 2 Species or Sub-species in the Falkland Islands. Immediately upon the arrival of the Erebus & Terror at Government House I transmitted to Sir William Hooker a full description of the Tussac Grass. This he did & Lord Stanley kindly sent me the account, in which my Species is called a Carex or Sedge! — & Falkland Island Cow & Calf will not eat any Sedge that has to feed upon it. Immediately upon this coming to my Son, by Capt. Sullivan, that Plant must be some Juncus, or Rush, for that Plant grows under the Sea: whereas Cattle-feeding Grass, & such

Head already received fine dried specimens from a late voyage to the Falklands (Mr. Wayth) & had chanced accidentally. That it was a Gigantic Festuca - grass, the "Festuca flabellata" of Gaudichaud. But before my letter could reach the Falklands, my Son writes me word in a letter I have from him 3 weeks ago — "The whole of the low country here is covered with peat-bogs & grass-lands which afford excellent pasture for the hardy Swiss Cattle & Horses & Horses. Near the sea-coast a very fine grass grows in immense abundance, called Tussac, & a very different plant from that of which I gave a description to Lord Governor on our arrival, which is very common here & also called Tussac. The true Tussac forms quite an entirely distinct feature in the landscape, covering immense tracts of land, especially on a sandy soil. Around its roots are formed immense balls which rise five & 6 feet from the ground, & are often as much in diameter. - from the summit of these balls arise a splendid graceful & leaves, 6 & 7 feet long, hanging down in all directions. These leaves grow exactly five feet of one another, leaving spaces which are almost wholly bare between them: - so that in walking among them, which you may easily do, you are quite hidden from view & then Tussac stools form a perfect labyrinth." —

There is no doubt that in that country this is a most invaluable pasture for cattle: — nay, the very sheep, in spring, are so fond & surfeit, that they are liable & certainly to the disease, or Staggers. There would not be any difficulty in bringing home in one of Mr. Lucas's boats, which will give no trouble whatever on board ship: & I have lately sent over

one of these for the purpose of bringing that & other curiosities to show. If we have made them our friends come & visit promise upon the second. But as there are really several very remarkable plants I should be very glad to know what matter Box & will pick it with plants for the Governor, if agreeable to him to send of a vessel going there. The Jamaica Bolax glabarina or resin-bush, is another much remarkable vegetable production which I wish to introduce. It is a little unintelligent plant, but always increasing on the outside in the form of a round ball till at last it gets to be as large as a round hay-stack, of a rounded form & as compact as a cushion. This & the Tristan are the two most extraordi-

DSI

dinary plants in the island.

I have an excellent coloured drawing of the Cunningham (round to Mr Wright) when these two plants are faithfully represented & the next time I go to town & will take them with me & have the pleasure of showing them to you.

Yours

my dear Sir John,

most faithfully

W. J. Hooker.

I may observe that Columbus touched many parts of the West Coast of Jamaica & especially visited Potts Cove, especially near the sea: — when I have the opportunity of writing to the Lallibrands again I shall enquire whether seeds can be obtained. I have no doubt — for in such a climate many plants in cultivation readily ripen seed.

Sir John Barrow Bart.

Recommending
Mr Arton
Director

kinder to resign. Should this be the case I should be anxious to be a candidate for the appointment, presuming as I do that it will be one of responsability & that a Scientific Botanist will be required for it. I have written to Sir Graeme to day begging that he will use those kindnesses to recommend my wishes to your Lordship, to entreat your influence in my behalf & to mention me to others who may also be able to serve me. I am personally known to Mr Walter Campbell of Islay & I have requested him to solicit the patronage of the Duke of Argyll, with whom I regret to say I have no personal acquaintance. I would advance forward to London to make more particular inquiries but I am in the midst of a course of Lectures in the University here & cannot possibly leave home.

I have the honour to be,
my Lord,
Your Lordships
most obed[t] & humble
Serv[t]
W. J. Hooker

HOOKER, WY. AUG 11.7.53.

47 5/16 Beverly Boulevard,
Los Angeles, Nov. 7, 1950.

Madame

I venture to refer to
the note you addressed to
the Curator of the Botanic
Garden, requesting to be
informed whether Botany existed
as a science in the time of
Henry the Eighth. Having
in the Eighth Volume
of the Encyclopedia Britannica
met with no mention of
Botany. I doubt that
there was much botanizing
in England during
the reign of Henry
the Eighth, & suppose
that Henry had other
employments to attend
to than botanizing
& gardening
perhaps, nor should I
be surprised to find
botany unknown in
Japan & China
during the reign
of Henry the Eighth

116

called Niger countries. All that is known of that, is contained in a volume entitled the "Niger Flora", & if you will trouble yourself to look thro' it, should you be surprised to find a Missionary gentleman a Liberia. Still you must in some sort withstand a growing acquaintance with the principles of Botany, it must be in a great measure a sealed

book. Your friend could be induced to send over well selected & well dried specimens of all the plants that grew about him, & would keep sketches of which with the common growing numbers of could easily trace him the names & any other particulars on the useful kinds. But for such an object the specimens must be satisfactory, & recommended in the enclosed copy of instructions for forming a Herbarium. Tropical Africa is full of novelty in the case of plants & many useful

one may be detected, not
yet known to us. Many me-
dicinal ones too, such as I
mean when the natives
call medicinal, which
are frequently quite inert.
Mr. King, junior, Miss
Anna Jones & North-
Repton, have taken upon
them particularly to
the Missionaries & me:
tried to collect Islands
& the products of Islands,
But I fear are generally
much careless prepared
& the Specimens of Islands
will prepared as to be
of little worthless.
Thanks President Roberts,

by whom I send and li:
ving plants, have returned
me the Cases Cobdly with
some very Good Specimens
Plants. I am at all
times most anxious to
encourage the collecting
of plants in the Interior
Africa: & there cannot
be a doubt but that
the products of many
may be turned to Good
account by the aid of
Science. There is much
to many useful woods
besides the ever known

Ofrecimiento de mi

Mi querido amigo y
dist.do discípulo
M. Toscano

Royal Gardens,
Kew. Sept.r 9. 1854.

My dear Mr. Mitchell

I am quite confident
that you that your Land
Steward is mean & last
I cannot judge from
a single leaf & flower
alone, how far he
has attended to the Irrigation of the
Magazine. The only
test is, since there
must be a selection,
for about Irrigation.

The little flowers I

DSI

the Orchideæ you plant could only be determined by some one very familiar with the plants of Islands, & I fear Dr Lindley's opinion upon them.

If you desire more correct information from Lord Letton send flowers & leaf in a small shallow box, a stiff cardboard box, such as one gets with a letter, to Dr Lindley direct.

I suppose you did not see Mr Pickering the last time he passed through on his way home from the Continent. Have the Indians been with the fruit trees.

Most truly Yours,

W. J. Hooker.

Sir William Jackson Hooker.

Rec'd Dec 29/58.

Famous Botanist

35

Oct. 25. 1858.

My dear Sir Machael

I must thank you heartily for your kind letter from Hongkong & the 23rd Augt & for your continued kind attentions to Wilford. I was extremely to have the opportunity & landing in Formosa, though under such disadvantageous circumstances for collecting. Sir Plants one much better from there than I expected & the Ferns are particularly good. Such

DSI

much on his getting
into the interior of
Japan & Sam and Lord
Elgin will do everything
in their power to facilitate
his researches there.

I am will come, thanks
to your kind arrangements
the Coasts of Chinese
Tartary, which ought
to afford a rich & splendid
United Room country.
I am to those he will face
in with the famous Ginseng: I anticipate the most
costly & most worthless of
all drugs.

I trust you have quite
recovered from your attack of fever: & that may
have the honor of seeing
you in New Gardens next
summer in excellent health.

I have the pleasure to be,
my dear Sir Marshall,
Your faithful &
truly obliged
W. J. Hooker.

Hooker, W. J.

Royal Gardens
Kew, Nov. 7, 1853

Madam

I venture to reply to the note you have addressed to the Curator of the Botanic Gardens, respecting a work on Botany suited to Liberia and to a person unacquainted himself with Botany. No one that I know of has yet botanized in Liberia, and assuredly nothing has been published on the plants known to exist there. In many respects no doubt the Vegetation will be analogous to that of the so-called Niger country. All that is known of that, is contained in a Volume entitled the "Niger Flora", and if you will humble yourself to have the enclosed note conveyed to Mr. Bailliere, it will be the means of obtaining a copy which I should be pleased to have sent to the Missionary gentleman at Liberia. Still you must be aware that without a previous acquaintance with the principles of Botany, it must be in a great measure a sealed Book. If yourfriend could be induced to send over well selected and well dried specimens of all the plants that grow about him, and would keep back a similar set with corresponding numbers, I could easily send him the names and any observations on the useful kinds. But for such an object the specimens must be satisfactory and as recommended in the enclosed copy of instruction for forming a Herbarium. Tropical Africa is full of novelty in the way of plants and many useful ones may be detected, not yet known to us. Many individual ones too, but not always what the natives call medicinal, which are frequently quite inert.

DS

W. J. Hooker

Nov. 7, 1853

My kind friend Miss Anna Gomez of North-Repps, has taken infinite pains to encourage the missionaries and natives to collect plants and the products of plants. But they are generally most carelessly preserved and the specimens of plants so ill prepared as to be utterly worthless.

President Roberts, by whom I sent out living plants, has returned me the Cases lately with some very good African plants. I am at all times most anxious to encourage the collecting of plants in tropical AFrica and there cannot be a doubt but that the products of many may be turned to good account by the aid of Science. There must be many useful woods besides the well known African Teak - many Gums, Drugs, Dyestuffs, Caoutchoucs, and Vegetable Oils, besides the Oil of the famous Guinea-Palm (Elais Guineensis), which latter is so extensively employed by Messrs. Paice & Co.

I have the honor to be,
Madam,

Your faithful and obed.t Servant,

W. J. Hooker.
